DETAILED ACTION

Election/Restriction:

1. The restriction mailed on 10 February 2005 is hereby withdrawn, because the Applicants' preliminary amendment filed on 02 December 2003 cancelled claims 1-23. However, the claims filed on 02 December 2003 are also subject to restriction to one of the following inventions under 35 U.S.C. 121:

- I. Claims 24-36, and 38 and 40, drawn to a method for isolating DNA encoding a homologue of human histamine H3 receptor, classified in class 436, subclass 504.
- II. Claims 37 and 39 drawn to a method for detecting the presence of human histamine H3 receptor, classified in class 435, subclass 71.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). The instant specification does not disclose that these methods would be used together. The method of isolating DNA that encodes a human histamine H3 receptor through hybridization techniques (Group I) and the method for detecting the presence of human histamine H3 receptor by using an antibody that binds to said receptor (group II) are unrelated as they comprise distinct steps and utilize different products which demonstrates that each method has a different mode of operation. Each invention

Art Unit: 1647

performs this function using a structurally and functionally divergent material. For these reasons the Inventions I-II are patentably distinct.

Furthermore, the distinct steps and products require separate and distinct searches. The inventions of Groups I-II have a separate status in the art as shown by their different classifications. As such, it would be burdensome to search the inventions of Groups I-II together.

Having shown that these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter as defined by MPEP § 808.02, the Examiner has prima facie shown a serious burden of search (see MPEP § 803). Therefore, an initial requirement of restriction for examination purposes as indicated is proper.

2. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
